**DETAILED ACTION**

***Notice to Applicant***

This communication is in response to the communication filed 02/09/2009.

Pending claim(s): 1-5, 7-11, 14-16, 18-19, 22, 24-26, 28-45. Cancelled claim(s): 6, 12-13, 17, 20-21, 23, 27-29. Amended claim(s): 1-2, 4, 7-11, 16, 22, 24-25, 30-33, 35, 38, 40, 43.

Examiner was unable to consider claims 14-15, 28-29 because these claims depend on previously cancelled claims. Therefore, Examiner cannot properly group these claims.

Additional clarification is requested.

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, 7-11, drawn to a system for generating a dimensional enhanced data grouping, classified in class 707, subclass 1.
- II. Claims 16, 18-19, 22, 24-26, drawn to a method for generating a dimensional enhanced data grouping, classified in class 705, subclass 3.
- III. Claims 30-37, drawn to a computer system for generating a dimensional enhanced data grouping, classified in class 707, subclass 1.
- IV. Claims 38-45, drawn to a dimensional enhanced data grouping and a queryable datamart, classified in class 707, subclass 1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III, and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as generating a dimensionally enhanced data grouping based on data that represent one or more factual and one or more dimensional attributes of source record data. Subcombination II has separate utility such as generating a dimensional enhanced data grouping based on patient records. Subcombination III has separate utility such as generating a dimensional enhanced data grouping based on any set of rules. Subcombination IV has separate utility such as being used to store any type of data generated by a hospital, a laboratory, a university, a military or a government installation, and an insurer, wherein the data is not necessarily limited to patient records. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to

provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above and there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:

- (a) the inventions have acquired a separate status in the art in view of their different classification;
- (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;
- (c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);
- (d) the prior art applicable to one invention would not likely be applicable to another invention;
- (e) the inventions are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

**Applicant is advised that the reply to this requirement to be complete must include (i) an election of a invention to be examined** even though the requirement may be traversed (37 CFR 1.143) **and (ii) identification of the claims encompassing the elected invention.**

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
